

SCHNEEBERG

SCHNEEBERG

Modell M 1.05 - Version 84 Zoll:

The M 1.05 84 presents itself with a noble touch of solid oak: wood from Austria, hand-picked and hand-sharpened.

Oak emits an inner calm and energy and complements the M 1.05 84 design perfectly.

The M 1.05 84 is also highly customizable: although we recommend oak wood, you can use other types of wood as well – but not all of them are suitable or meet the high standards.

Our experts will be happy to advise you.

The M 1.05 84 not only meets the highest quality standards, it is also flexible and responds efficiently to customer requests.

Our customers can choose the type of wood, the general coloring or the amount and type of ports needed (USB, HDMI ...). Many things are possible – feel free to ask our experts!

Delivery and assembly are carried out by qualified personnel. With our products there will be no remaining screws as with diverse build-it-yourself-kits. SCHNEEBERG has been working for the aerospace so we work reliably and accurately.

Height adjustability

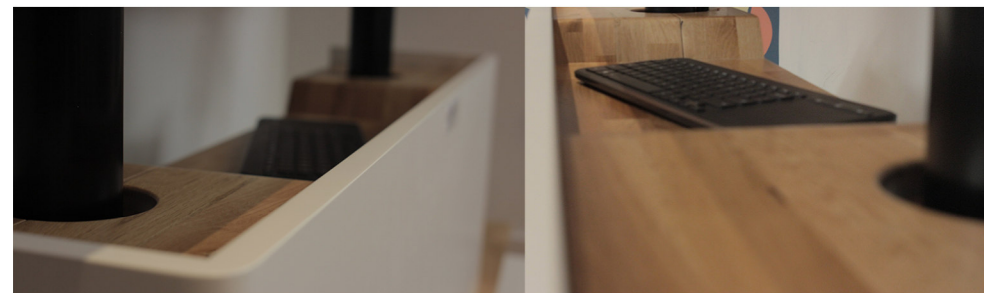

The M 1.05 84 is adjustable in height: Ergonomics is one of our most important concerns. When you enter your body height into the M 1.05 84, it silently moves out to the precise, ergonomical position. The memory-function can store up to three settings. You can adjust the ergonomical correct pre-setting according to your individual needs - also with the remote control.

SCHNEEBERG

The keyboard

When the M 1.05 84 moves out, a „secret compartment“ appears, which holds the keyboard and the remote, etc. We are talking about a tray, made of fine solid wood which merges harmoniously into the overall design.

The glass holder

No other presentation furniture can beat the M 1.05 84 – it can even provide you with a glass of water! With the perfectly integrated glass holder you will have your drink handy at any time.

Stability and Ergonomics

SCHNEEBERG operates in the aerospace and knows about the importance of ground control. The M 1.05 84 is a small, static masterpiece: We don't use massive base plates! We focus on stability, design und ergonomics: our rubberized and slip-proof base plate is walkable and slightly bevelled, thus an ergonomic presentation and work is guaranteed.
